Commentary and Analysis

Wheat

Platts European Wheat Daily Commentary

- Russian wheat offers drop to \$242/mt
- Turkish supply stays ample, prices fall
- French wheat gains Eur1.50/mt on futures

The Russian wheat market was bearish June 5, with the most competitive July offers heard at about \$242/metric ton.

"The market has moved lower," a Russian trader said.

Another trader noted that with harvest approaching, sellers were under pressure and were lowering offers as they compete for demand.

A third trader described the market as quiet, adding that buyers were holding back in anticipation of further price declines.

The Turkish market also showed a bearish tone. One trader said supply was ample, while expectations for a strong domestic crop were adding further pressure to prices.

French wheat strengthened, mirroring the futures market. Both FOB and CPT Rouen gained by Eur1.50/mt.

A total of 41,573 mt of soft wheat was shipped from France's Rouen port during the week of May 28-June 3, with all listed volumes destined for Senegal and Côte d'Ivoire, according to the weekly shipping schedule by Haropa Port. No soft wheat shipments were recorded to Morocco, a long-standing destination for French wheat.

Platts Asia Wheat Daily Commentary

- Australian wheat steady
- South Korea buys US, Canadian milling wheat

Australian wheat prices were stable day over day June 5.

Fuel and fertilizer supply concerns have largely abated across most of Australia, and while prices were high, they were off their highs. Most growers had what they needed for the season, a Victoria-based trade source said.

Australian containerized wheat prices have continued to soften week over week, with Australian Premium White now offered at least \$10/metric ton lower at \$300/mt CFR for old-crop shipment, said several Southeast Asian trade sources.

"The gap is still big against Black Sea 11.5% wheat. [It's] already the cheapest, [so] buyers are hand-to-mouth and not long," said an Indonesian milling wheat buyer.

Black Sea 11.5% wheat was heard offered at high-\$270s/mt CFR, according to several Asian trade sources.

A South Korean milling wheat buyer purchased US and Canadian milling wheat in tenders June 4, according to a Seoul-based trade source.

The buyer paid \$244.43/mt FOB for 7,800 metric tons of soft white wheat (9.5%-11% protein), \$284.66/mt FOB for 1,000 mt of

Platts Canada Wheat Daily Commentary

- August basis offers jump against falling futures
- Trade action heard slow

Platts assessed Canada Western Red Spring Wheat 13.5% FOB Vancouver 30-45 days forward at \$254.82/metric tons on June 5, \$0.55/mt lower than June 4.

The downtrend in futures slowed headed into the weekend, but still weighed on cash values. The July (N) MIAH Hard Red Spring wheat futures contract fell 1.5 cents/bushel to \$6.195/bu and the September (U) contract fell 1 cent/bushel to \$6.4625/bu.

The July and September futures contracts lost a net 44.25 cents and 42.25 cents, respectively, over the last week. The steady decline in futures had pushed traders to the sidelines and left basis levels mostly unchanged for the start of the week, but higher offers have begun to reflect the cut to cash values.

Offers for August shipment periods were heard in the 90-95/ bu range during the session, well up from the 60 cent/bu level previously heard.

“Besides the pressure from the futures dropping, what I think is holding basis prices from flying higher has been the better weather news delivered to the market for this week,” said an exporter.

Trade activity for July and August remained limited. Uncertainty over new crop production as they finish plantings and volatile moves in cash pricing have slowed farmer sales, while falling prices keep buyers waiting for a good entry point.

Corn

Platts Asia Corn Daily Commentary

- Asian corn prices fall for fourth straight day
- Feed corn CFR Northeast Asia drops \$3/mt to \$256/mt
- Lower CFR Vietnam prices lead to flurry of trades

Asian corn prices declined for the fourth day in a row June 5, tracking Chicago Board of Trade futures, a bearish price outlook regarding good weather in the US and traders accepting lower prices.

Platts assessed feed quality corn CFR Northeast Asia down \$3/metric ton at \$256/mt for cargoes arriving over Sept. 3 to Oct. 3.

Market participants held bearish views about the corn market as “there is good weather in the US playing the biggest impact, and also uncertainty that China will actually purchase US products as promised,” according to a Singapore-based trader.

Traders continued to sell South American July, August and September cargoes at \$256-\$258/mt CFR Vietnam levels throughout June 4-5, two traders confirmed.

In South Korea, only two corn cargoes for October arrival were heard to be still in demand following a flurry of October-arrival purchases earlier in the week.

The market was quiet June 5 as “everybody would like to wait further to see prices soften more,” said a South Korean trader.

Most Japanese feed millers had completed August shipment coverage, while trading houses were quiet as they had already

secured August shipments and were shifting their focus to September, according to a Japanese trader.

However, buying activity for September shipments was sluggish as Japanese traders were waiting for prices to fall further amid the Brazilian Safrinha corn crop harvest, the same trader said.

US Pacific Northwest corn tradable values for September shipment were heard unchanged at the low-to-mid-130s cents/ bu over September (U) CBOT futures.

Overnight, the Chicago Board of Trade July (N) contract was down 7 cents/bu at 424.5 cents/bu and the September (U) contract was down 7.5 cents/bu at 432.75 cents/bu.

From December 16 to May 15 the prompt Brazil loading month value is not published.

Platts Latin America Corn Daily Commentary

- South American corn prices fall with CBOT
- Argentine Up River premiums rise
- Brazil May exports reach 281,639 mt

South American FOB corn prices fell June 5, tracking weaker Chicago Board of Trade futures.

Argentine FOB Up River premiums for July loading continued to rise amid higher offers and bids.

"The decline in CBOT futures strengthened premiums," said an Argentina-based broker.

The Brazilian FOB Santos premiums for August loading were unchanged during the day.

The US dollar to Brazilian real exchange rate stood at Real 5.1737/\$1 as of 5:30 pm Brasilia time, up 1.84% day over day.

In Brazil's domestic market, prices remained steady in the Sorriso, Rio Verde and Maringá regions.

According to a buyer in the Rio Verde region, buyers are seeking lower prices in the spot market.

"A potential decline in prices could occur next week," the source said.

The Brazilian Grain Exporters Association, ANEC, forecasts Brazil's May corn shipments at 281,639 mt, below last week's estimate but up from 68,400 mt a year earlier.

ANEC also expects 147,793 mt of corn to be shipped from the ports of Paranaguá and Santarém in the week ended June 6.

The expectation is that corn export volumes will start to increase in June, but the rise should be more significant from July 2026 onward, driven by the harvest progress in Brazil.

ANEC estimates that Brazil will export 485,695 mt of corn in June, down from 568,668 mt in the same month last year.

Platts US Corn Daily Commentary

- US corn prices decline
- Large supply weighs on market ahead of harvest: sources

US corn prices declined June 5, tracking Chicago Board of Trade futures and weaker basis reported by trader sources.

July (N) CBOT corn future contracts settled at \$4.1750/bu on June 5, decreasing 7 cents during the business day. And September (U) closed at \$4.2700/bu, losing 5.75 cents in the same period.

"There still feels like there is a very large supply of corn sitting out there in the country that will move at some time between now and harvest," said a broker source.

Meanwhile, a trader source said that during the session value basis got weaker, with trades for July at CN+86 and CN+85.

Platts assessed June 5 the outright price for June shipments to New Orleans in the incoterm CIF at \$194.70/mt and for July shipments at \$197.85/mt. And FOB Gulf for August was assessed at \$205.91/mt.

Platts is part of S&P Global Energy.

Platts European Corn Daily Commentary

- Ukrainian corn holds steady at \$236/mt
- Turkey demand stays weak on grain prices
- Romania old-crop supply nears depletion

The Black Sea corn market was unchanged on June 5, with market participants reporting a very slow pace of trading as the week closed.

Platts assessed Ukrainian corn unchanged at \$236/metric ton, below a July offer at \$237/mt. There were no bids heard in the market within the assessment window.

Demand in key destination markets remained sluggish. In Turkey, feed manufacturers continued to limit corn purchases due to more attractive pricing for wheat and barley.

In Italy, consumption in the feed sector also remained slow. Import sources reported that retail demand for meat, eggs, and poultry has dropped by roughly 20% over the last two months, leading feed mills to hold higher stocks and slow down animal feed usage.

For the CVB market, old-crop supply from Romania remained extremely tight. Traders estimated that only 100,000-150,000 mt of corn remains available for July exports, as the country has virtually finished shipping its old crop. Sellers in Romania reported that these remaining small stocks are likely to be carried over into the next season or sold locally.

Platts Asia Soybean Daily Commentary

- Nearby shipment traded
- CBOT futures decreased amid bearish sentiment

CFR China soybean month-one July shipment was down \$1.75/metric ton day over day at \$487.77/mt June 5, while basis was up 15 cents/bu at 200 cents/bu over July (N) Chicago Board of Trade (CBOT) futures

Overnight, two cargoes of July shipment were heard to have traded at 191 cents/bu and 200 cents/bu over July (N) CBOT, basis CFR China.

Nonetheless, offer availability was limited amid a public holiday in Brazil, according to multiple Chinese trade sources.

In addition, CBOT futures continued to extend their losses weighed on sentiment, prompting market participants to retreat their offers later into the US trading session.

CBOT July (N) futures dropped 19.75 cents day over day to 1127.50 cents/bu at the 0830 GMT Asian close June 5.

CBOT futures declined were attributed to multiple bearish factors, with a Chinese soybean trade source noting that earlier weakness was partly linked to uncertainty over Chinese demand for US soybeans.

"However, latest selloff was more driven by improving US

Platts Brazil Soybean Daily Commentary

- Nearby shipments traded in Paranaguá
- CBOT soybeans hit a multimonth low on a strong dollar, favorable US weather

Platts assessed the SOYBEX FOB Santos soybean contract for July loading at \$443.33/metric ton on June 5, \$7.17/mt lower than previously assessed June 3.

CBOT soybean futures fell to a multimonth low, pressured heavily by a surging US Dollar Index, excellent US Midwest crop weather, rapid planting progress, and a steep decline in crude oil prices that dragged down soy oil, analysts said.

Brazil is expected to export 12.36 million metric tons of soybeans in June, down 10.4% from 13.79 million mt in the year-ago month, according to the latest data from Anec, the Brazilian Grain Exporters Association.

May soybean exports hit a record high of 15.42 million mt, 8.7% above May 2025 levels, according to the data published May 6.

Brazil's soybean exports through the first six months of 2026 are projected at 70.87 million mt, up 4.1% over the same period in 2026, according to Anec.

The FOB Paranaguá paper market was active in the beginning of the session, with trades heard for July and August 2026 shipments.

FOB premiums remained firm, supported by another session of decline in CBOT soybean futures.

The US dollar versus the Brazilian real settled at Real 5.1538/\$1 at 4:30 pm Brasilia time. Domestic soybean prices were lower in the main producing regions.

Platts is part of S&P Global Energy.

Platts US Soybeans Daily Commentary

- Outright prices fall further on June 5
- Uncertainty on US-China soybean trade remains: sources

The US soybeans market ended the week that finished on June 5 with falling outright prices for the fifth day in a row, with a bearish sentiment and doubts on US-China soybean trade prevailing among participants.

Platts, part of S&P Global Energy, assessed SOYBEX FOB New Orleans for July shipment \$2.94/metric ton down from the previous business day at \$448.82/mt. Platts assessed basis for FOB Gulf for July shipment remained unchanged at 100 cents/bushel over the July (N) soybeans futures contract.

Platts assessed the outright price for CIF New Orleans for June shipment \$4.04/mt down from June 4 at \$442.21/mt. Platts assessed basis for CIF NOLA for June shipment fell 3 cents day over day to 82 cents/bu over the July (N) soybeans futures contract.

Outright prices have been pressured throughout the week, with CBOT July (N) futures falling 65.25 cents from June 1 to June 5, to end the week at 1121.5 cents/bu.

In turn, SOYBEX FOB New Orleans for July shipment fell \$21.77/mt from June 1, while the outright price for CIF NOLA for June shipment fell \$23.61/mt.

Sources reported massive selling in the futures market from June 1-5, with entities liquidating positions.

"When you start to get to a major repricing like this, at some point the position of anyone who was long, whether they agree with the fundamentals or not, is losing money," a trader in the CIF NOLA market said. "And you can only hold that for so long before you just have to give in and sell. This is a classic situation of 'no one is bigger than the market.'"

Statements from the US Deputy Agriculture Secretary Stephen Vaden were published on June 2 by the Wall Street Journal, suggesting that China had started placing orders for new crop soybeans. However, sources in the export market dismissed the claims and have pointed to a lack of reasons or news to be bullish about.

"I see no indication of Vaden's comments being real," a trader in the FOB Gulf market said on June 3. "I think the real question

is: can you think of a reason to be bullish? Pretty much all the reasons some were getting long on are not playing out this week. China isn't buying, weather is improving, etc.”

“There are traders in the market now that think that, since we added 13% tariffs on China due to the Section 301 investigations, the new crop 25mt agreement [reached in October] is now in danger of not being bought,” the CIF NOLA trader added.

Animal Feed

Platts Latin America Soybean Meal Daily Commentary

- Premiums rise in Latin America
- Prices decrease on CBOTs

South American soybean meal FOB prices decreased on June 5, tracking weaker Chicago Board of Trade futures.

Argentine FOB Up River premiums for July loading rose amid slow negotiation interest.

The Brazilian FOB Paranaguá premiums for July loading increased due to higher bids.

No trades were heard during the day.

The Brazilian Grain Exporters Association estimates that Brazil will export 1.65 million mt of soybean meal in June, virtually steady from 1.67 million mt by the same month last year, according to the latest data from Anec.

If the current shipment-schedule-based forecast is confirmed, Brazil will record exports of 12.06 million mt in the first half of the year, up from 11.27 million mt in the same period of 2025.

The CBOT July (N) contract settled at \$308.50/short ton, down \$5.20/st.

Platts European Animal Feed Daily Commentary

- Dutch market eases as buyers await lower prices
- Spanish corn falls on barley pressure, early harvest
- Soybean meal weakens on ample port supply

Northern Europe

In the week ending June 5, the Dutch market was bearish.

A Dutch trader said the market had eased in line with CBOT's decline over the past couple of days, and that buyers were holding back to secure the lowest possible prices.

Another trader noted that premiums were being heard at about \$45 over the underlying “trading” level.

Southern Europe

Spanish corn and soybean meal prices were bearish throughout the day and remained soft across the week.

One trader attributed the corn decline to pressure from barley prices. He also said harvesting had already started in the earliest-ripening areas — earlier than expected due to the heat — and would move gradually across Spain.

Another trader added that buyers were staying away from the ports and closely monitoring progress in the domestic harvest.

Meanwhile, soybean meal prices fell during the day as Spanish port supply was plentiful, with soymeal weakening as replacement costs fell relative to Chicago, the first trader said.

Platts is part of S&P Global Energy.

Platts US Distiller Grains DDGS Daily Commentary

- CIF New Orleans price pressured further on June 5
- US DDGS prices remain high versus other feeding ingredients

The US dried distillers grains with solubles market finished the week on June 5 on a downward note, with little demand seen, especially in the export market, and an increase in production, according to sources.

Platts assessed CIF New Orleans DDGS barges for the June shipment period at \$211/short ton on June 5, down \$4/st from June 4.

The Chicago DDGS truck market for the June delivery period was assessed at \$186/st, unchanged from June 4. The South

California rail market for the June delivery period was assessed at \$231/st, unchanged from June 4.

Sources continued to see low demand, especially on the export side, which has pressured prices amid a decline in the soybean meal market and increasing competition from other feeding ingredients.

"It was a very quiet week regarding demand," a trader said.

"Freight is still high," a second trader said. "The outright price remains high compared to other ingredients. Soybean meal also fell a lot on June 4, pressuring DDGS."

According to sources, the outlook for US DDGS is complex, with "a lot of challenges" playing out, including the war in the Middle East, another trader said.

From June 1-5, the CIF New Orleans outright price fell \$12/st, while the Chicago trucks price decreased \$10/st, and the South California rail market fell \$6/st.

Platts is part of S&P Global Energy.

Vegetable Oils

Platts Asia Palm Oil Daily Commentary

- Asian palm oil futures fall
- India demand slow
- Buyers cautious amid geopolitical concerns

The Asian palm oil market weakened June 5.

Palm oil futures on Bursa Malaysia Derivatives fell as Chinese vegetable oil futures dropped, while strength in Chicago soybean oil futures and a weaker Malaysian ringgit limited losses.

The benchmark palm oil contract for August delivery on the Bursa Malaysia commodity exchange declined MR47/metric ton to MR4,554/mt on June 5.

The Indian market demand remained slow but is expected to improve after a trade was concluded at \$1,230/mt for a June shipment to the west coast of India.

"The price level is moving closer to buyers' preferred level, but buyers are cautious about purchasing on Friday due to concerns about potential developments in geopolitical tensions over the weekend, which could shift price trends next week," an India-based trader said.

Platts assessed the CPO CFR WC India price at \$1,230/mt on June 5 for June loading, down \$5/mt from June 4, while the July shipment was \$5/mt higher than June.

Platts assessed the CPO FOB Indonesia price at \$1,182.50/mt on June 5 for June loading, down \$5/mt from June 4, while the July shipment was \$5/mt higher than June.

Platts assessed the RBDPS FOB Indonesia price at \$1,077.50/mt on June 5 for June loading, down \$22.50/mt from June 4, while the July shipment was \$5/mt higher than June.

Platts assessed the PFAD FOB Indonesia price at \$992.50/mt on June 5 for June loading, down \$7.50/mt from June 4, while the July shipment was \$5/mt higher than June.

Platts is part of S&P Global Energy.

Platts Latin America Soybean Oil Daily Commentary

- CBOT soy oil hits 2022 high, drops 5.8%
- Argentina, Brazil basis falls to record lows
- Record Brazil crop pressures export markets

South American soybean oil markets remained highly volatile and increasingly disconnected from Chicago Board of Trade futures during the period from May 29 to June 5, as soybean oil futures rallied to the highest levels since 2022 before reversing sharply lower alongside broader energy-linked commodity markets.

CBOT July soybean oil futures rose from 77.72 cents/lb May 29 to a multiyear high of 79.09 cents/lb June 1, before declining around 5.8% over the following two trading sessions to settle at 74.12 cents/lb June 5.

Market participants said the rally was initially supported by gains in crude oil markets, expanding renewable diesel demand expectations and optimism surrounding higher US biomass-based diesel blending mandates. Additional support came from tightening global vegetable oil balances linked to Indonesia's upcoming B50 biodiesel mandate and broader renewable diesel demand growth in North America.

The rally in soybean oil futures reversed sharply later in the week after favorable US crop conditions and the absence of confirmed Chinese soybean purchases encouraged speculative long liquidation by commodity funds. CBOT July soybean oil futures fell 5.83% over the two trading sessions following June 3 to settle at 74.12 cents/lb June 5, while NYMEX WTI crude oil futures declined 5.92% over the same period to settle at \$90.33/barrel.

Despite the sharp rally in futures, physical FOB soybean oil markets in South America remained structurally pressured by abundant regional soybean supply and aggressive exporter competition. Market participants said the divergence between policy-supported US soybean oil futures and heavily supplied South American export markets became even more pronounced during the week.

In Argentina, Platts-assessed soybean oil FOB Up River prices for July loading rose from \$1,173.30/mt May 29 to \$1,181.46/mt June 1 before weakening to \$1,160.07/mt by June 5. In Brazil, FOB Paranaguá soybean oil prices for July loading increased from \$1,175.51/mt May 29 to \$1,195.13/mt June 3 before retreating sharply to \$1,166.69/mt June 5. August-loading Paranaguá values rose to as high as \$1,197.77/mt June 3 before falling back to \$1,177.93/mt by the end of the period.

FOB soybean oil basis levels weakened sharply to historically discounted levels during the first half of the period as exporters continued competing aggressively amid expectations for elevated soybean oil availability in coming months. Argentina FOB Up River July basis weakened to minus 2,550 points to CBOT July futures June 1, while Brazil FOB Paranaguá July basis weakened to minus 2,530 points and August basis to minus 2,380 points.

Market participants said the collapse in basis levels highlighted the growing disconnect between energy-supported soybean oil futures and underlying physical export market fundamentals in South America.

"CBOT soybean oil futures are reflecting stronger renewable diesel demand and biofuel policy support in the US, while physically South America still has abundant soybean oil supplies," a Brazil-based soybean oil trader said. "Exporters continue competing aggressively on premiums because there is still a lot of soybean oil available."

Participants continued monitoring record South American crop and crush projections after Brazil's National Supply Company, or Conab, maintained its 2025-26 soybean production estimate at a record 180.13 million mt. At the same time, the Brazilian Association of Vegetable Oil Industries, or ABIOVE, projected Brazilian soybean processing at a record 62.5 million mt in 2026 and soybean oil production at 12.55 million mt.

Market participants said Brazil's B15 biodiesel mandate continued supporting domestic soybean oil demand, helping absorb part of the expanding soybean oil supply despite ongoing pressure on export premiums.

Participants also monitored the latest US Weekly Crop Progress report, which showed 87% of the US soybean crop planted by June 1, 7 percentage points ahead of the five-year

average, while soybean emergence reached 65%, 8 percentage points above normal. Initial US soybean crop ratings showed 66% of the crop in good-to-excellent condition, below market expectations.

Despite the sharp decline in futures, South American FOB basis levels recovered significantly from record discounts, with Argentina July basis strengthening to minus 2,150 points to CBOT July futures June 5 and Brazil Paranaguá July basis recovering to minus 2,120 points. However, market participants said the recovery primarily reflected weaker CBOT soybean oil futures rather than a material improvement in underlying export demand conditions.

Demand into Asia remained broadly steady but continued lagging the pace of South American supply growth. Participants said elevated freight costs and competitively priced palm oil continued constraining delivered arbitrage opportunities for soybean oil exports into Asian destinations despite continued volatility in global soybean oil futures.

Platts is part of S&P Global Energy.

Platts Europe Vegetable Oil Daily Commentary

- Sunflower oil pressured by weaker destination demand
- Processors shift focus toward rapeseed
- Rapeseed oil outperforms sunflower oil complex

European vegetable oil markets were mixed June 5, with sunflower oil softening slightly while rapeseed oil continued to strengthen.

FOB Black Sea sunflower oil fell \$5/metric ton to \$1,374/mt, reflecting weaker demand from key destination markets. In contrast, RSO FOB Dutch Mills front-month increased Eur 2/mt to Eur 1,151/mt, while the second position remained elevated at Eur 1,159/mt. The divergence highlights a growing separation between sunflower oil and rapeseed oil fundamentals as market participants increasingly focus on the approaching rapeseed harvest.

Sunflower oil values came under modest pressure due to softer buying interest. A source based in Ukraine indicated that "FOB Ukraine [is] slightly softer," attributing the move to "less destination demand." This suggests that buyers remain adequately covered and are showing limited urgency to secure additional cargoes. The softer demand environment is reducing support for nearby sunflower oil prices, particularly as major importers continue to manage comfortable inventory positions.

At the same time, attention in Ukraine is increasingly shifting toward the new rapeseed crop. According to the source, "rapeseed of the new harvest continues to strengthen its position." The source added that "against the background of a limited supply of sunflower seeds, factories have already begun an active search for alternative raw materials, forming demand for rapeseed of the 2026 harvest." This indicates that processors are adapting to tight sunflower seed availability by positioning earlier for rapeseed supplies, supporting forward rapeseed

values and helping explain the resilience in European rapeseed oil prices.

For Europe, the result is a market experiencing diverging trends between the two major oilseed complexes. Softer destination demand is weighing on sunflower oil and limiting upside potential, while growing interest in new-crop rapeseed is providing support to rapeseed oil markets. The continued shift in processor focus toward rapeseed, combined with tight sunflower seed availability, suggests that rapeseed oil may continue to outperform sunflower oil in the near term, particularly as harvest preparations accelerate across the Black Sea region.

Global food prices steady in May as cereal gains offset oil decline

- Cereal prices rise 2.6% in fourth gain
- Vegetable oil index drops 4.6% in May
- Global food prices hold steady at 130.8

Global food commodity prices remained broadly stable in May as increases in cereal and sugar quotations were offset by declining vegetable oil and dairy values, with the UN Food and Agriculture Organization's benchmark index holding near April levels despite diverging trends across major commodity groups.

The FAO Food Price Index averaged 130.8 points in May 2026, down 0.2 points from its revised April level, the organization said June 5. The index stood 3.7 points or 2.9% higher than a year earlier but remained 29.4 points or 18.4% below its March 2022 peak, reflecting continued moderation from the extreme levels reached during the Ukraine conflict.

The stability in the headline index masked significant movement within individual commodity categories, with cereals posting their fourth consecutive monthly increase while vegetable oils declined for the first time in 2026. The divergence reflects how different agricultural markets are responding to distinct pressures, from weather-related production risks in grain belts to shifting biofuel demand dynamics in oilseed markets.

Cereals extend gains

The FAO Cereal Price Index averaged 114.3 points in May, up 2.9 points or 2.6% from April and 5.3 points or 4.9% above year-earlier levels, as prices rose across all major cereals.

World wheat prices increased for the fourth consecutive month, supported by smaller expected harvests in major exporters, including the US, where winter wheat crop conditions are among the least favorable in decades, the FAO said.

Higher fuel and fertilizer costs added upward pressure globally, while maize prices remained supported by stronger import demand in key markets, tighter availability in Brazil and the US, and firmer energy prices boosting ethanol-related demand. International prices of sorghum and barley increased mainly due to spillover effects from tighter global markets for maize and wheat.

The FAO All Rice Price Index increased 2.7% in May as weather concerns and higher crude oil and derivative prices underpinned quotations in some leading Asian exporting countries.

"While global food commodity markets have remained broadly resilient, rising cereal prices underscore vulnerability to weather-related risks and disruptions in energy and input markets," FAO markets and trade division director Boubaker Ben-Belhassen said. "Continued uncertainty affecting key trade routes, including the Strait of Hormuz, could reduce fertilizer use and place additional pressure on food prices, highlighting the need for coordinated international action."

South American soybean oil vs Asian crude palm oil

Oils retreat

The FAO Vegetable Oil Price Index averaged 185.0 points in May, down 9.0 points or 4.6% from April, marking the first monthly decline since the beginning of 2026. The decrease was mainly driven by lower prices of palm and soy oils, which more than offset increases in rapeseed oil and sunflower oil prices.

After rising for five consecutive months, international palm oil prices declined, reflecting expectations of weaker global import demand and uncertainty in crude oil markets. World soyoil prices showed mixed trends, with seasonal increases in exportable supplies weighing on prices in South America, while firm biofuel demand supported values in the US.

Rapeseed oil prices rose on seasonally tightening supplies in the EU, while sunflower oil quotations continued to increase, underpinned by persistent supply tightness, particularly in Ukraine.

EU: Platts sugar vs ethanol parity

The FAO Sugar Price Index averaged 95.1 points in May, up 6.6 points or 7.5% from April, marking the highest level since October 2025 but remaining 14.3 points or 13.1% below year-earlier levels. The increase was mainly driven by concerns over an anticipated tightening of global sugar supplies in the coming months, the FAO said.

In Brazil's southern growing regions, data showing a lower share of sugarcane allocated to sugar production raised expectations of greater diversion to ethanol, supporting world sugar prices. Additional support resulted from concerns that El Niño conditions could adversely affect sugar production in India and Thailand in 2026-27, potentially reducing global export availability.

The FAO Meat Price Index averaged 130.5 points in May, almost unchanged from its revised April value but 7.7 points or 6.3% above year-earlier levels. International bovine meat prices rose, supported by robust import demand, particularly from China, where import quota allocations continued to be rapidly utilized, and from the US amid persistently tight domestic supplies.

The FAO Dairy Price Index averaged 119.2 points in May, down 0.5 points or 0.5% from April and 34.5 points or 22.4% below year-earlier levels. International butter prices continued to decline in both Europe and Oceania, as improved milkfat availability and heightened competition among major exporters weighed on quotations.

Platts, part of S&P Global Energy, assessed crude palm oil CFR WC India price at \$1,235/metric ton June 4 for June loading, down \$20/mt from June 3, below an offer and above a bid.

African swine fever and grain prices pressure EU feed market in H1 2026

- ASF outbreaks cut EU pig feed demand 10%-20%: sources
- EU compound feed output holds at 152 mil mt: FEFAC

Europe's feed sector saw lower demand in the first half of 2026 as African swine fever (ASF) outbreaks and shifting grain demand weighed on the market.

Total EU compound feed production is expected to remain near 152 million metric tons in 2026, according to data released late May by The European Feed Manufacturers' Federation.

Soybean meal prices peaked in late April, with Platts, part of S&P Global Energy, assessing ex-works Spain soybean meal at Eur382/mt on April 29, up 19% since January. FOB Netherlands soybean meal rose 17.8% over the same period, driven by higher freight rates and a CBOT rally, according to European traders and brokers. On June 4, Platts assessed Spain ex-works corn at Eur224/mt, ex-works Spain soybean meal at Eur357.25/mt, and FOB Netherlands at Eur363/mt. Traders said lower demand for corn and ample supply for soybean meal in Spain and the Netherlands pressured prices.

Spanish traders and brokers said June 2 that pig feed demand continued to fall due to ASF-related herd losses, especially

in Spain, where outbreaks in wild boar led to estimated herd reductions of 10%-20%. Spain's position as the EU's top pork exporter and feed producer heightened market concerns. "Any prolonged disease-related disruption there has implications not only for domestic feed demand, but also for wider market sentiment across Europe," a Spain-based trader said June 2.

Recent avian flu cases in Poland and France added uncertainty, with gradual effects on feed demand expected if outbreaks persist, a Netherlands-based broker said June 4.

The EU imported 1.12 million mt of soybean meal in March, up from 1.09 million mt in February, European Commission data released May 13 showed. Poland and Spain led imports, with Brazil and Argentina as main suppliers. Corn imports fell to 1.4 million mt in March, down from 2.06 million mt in the previous marketing year. Spain, Italy and the Netherlands were top importers, with Ukraine as the main supplier.

European Commission data showed that corn production for 2026 is estimated at 60,600 mt. Seasonal barley harvesting shifted some feed demand from corn, though substitution varied by buyer and feed formula. "Corn demand will not fully shift to barley; it depends on the feed formula each company is using," a Spanish broker said June 3.

Europe's feed market enters the second half of 2026 facing ongoing disease risks, EU Deforestation Regulation (EUDR) uncertainty and geopolitical disruptions, according to traders and brokers in Spain, the Netherlands and Italy said June 4.

Industry pushes for DDGS quality consistency, mycotoxin management, new value opportunities

- Mycotoxin management gains attention
- Sorghum grains offer protein alternatives

Managing mycotoxin risk, improving product standardization, and identifying new value opportunities were the main topics US distillers dried grains with solubles market participants discussed during the Fuel Ethanol Workshop in St. Louis, Missouri, June 2-4.

Panelists emphasized that maintaining consistent DDGS quality remains a challenge for the industry, as product characteristics can vary between plants and production runs.

Nicolas Hardt, innovation and development manager at DSM-Firmenich, highlighted the importance of understanding fermentation processes and plant management to reduce mycotoxin risks in DDGS. Hardt said producers often struggle to determine which final products contain higher or lower levels of mycotoxins because contamination can occur at multiple stages of production.

He said that more than 99% of fumonisins can be reduced during fermentation under standard industrial conditions and said proper process management is essential.

According to Hardt, DDGS quality should no longer be determined solely by the fumonisin content of incoming corn, stressing that "everyone needs to know their part properly to avoid contamination."

Joe Ward, executive director of the Distillers Technology Council, said the industry needs more accurate, reproducible testing procedures to improve confidence in DDGS quality and specifications. Ward described efforts between the council and the American Society for Testing and Materials to establish standardized testing methods and best practices for distillers' co-products.

"We know that we have to have test results that are accurate and reproducible," Ward said.

Ward explained that variability in testing methods, sample preparation and laboratory procedures can lead to inconsistent results, particularly for moisture and mycotoxin analyses. He said that some laboratories analyzing the same sample can generate different results because they are not following identical procedures.

"What ends up happening is we don't all follow the same procedures," he said.

As part of the initiative, ASTM committees are developing standardized protocols for sample preparation and moisture analysis. Ward said establishing common procedures would reduce disputes between buyers and sellers and help ensure that a DDGS sample tested in the US would generate the same result when analyzed in Europe or Asia.

"If you prepare it the same way I do and use the analysis the way I do, you're going to get the same results," Ward said.

Ward added that consistent testing standards could help the industry rebuild value in DDGS markets by giving customers greater confidence in guaranteed product specifications.

Another discussion focused on alternative feedstocks and their impact on co-product value.

Matt Durler, managing director of farm programs at the National Sorghum Producers, said sorghum-based distillers grains may offer opportunities in certain feed markets due to their nutritional profile. Durler added that sorghum distillers grains before oil removal contain roughly 35% protein and 10.5% crude fat, providing a higher protein option than traditional corn-based DDGS.

According to Durler, the value of sorghum distillers grains largely depends on the end market. Direct sales to end users often trade at parity with corn distillers grains, while products marketed through third parties or blended with other origins can face discounts of \$10-\$15/ton. He also pointed to niche opportunities in non-genetically modified organisms, pet food and high-protein feed markets.

Durler said the higher protein content could make sorghum distillers grains "a potential option for customers" seeking alternatives to conventional corn DDGS.

Discussions at the FEW 2026 suggested that improving testing consistency, reducing mycotoxin risks and developing differentiated co-product markets remain key priorities as the ethanol industry works to strengthen DDGS value and expand market opportunities.

Platts, part of S&P Global Energy, assessed CIF New Orleans dried distillers grains with solubles barges for the June shipment

period at \$211/short ton on June 5. The Chicago DDGS truck market for the same delivery period was assessed at \$186/st, and the South California rail market for the June delivery period was assessed at \$231/st.

Platts assessed Chicago Terminal ethanol at \$1.9190/gallon on June 5.

Brazil H1 2026 soybean exports projected up 4.1%: ANEC

- Brazil May soybean exports hit record 15.42 million mt
- June soybean meal exports to reach 1.65 million mt
- Corn exports are forecast at 147,793 mt this week

Brazil is expected to export 12.36 million metric tons of soybeans in June, down 10.4% from 13.79 million mt in the year-ago month, according to the latest data from Anec, the Brazilian Grain Exporters Association.

May soybean exports hit a record high of 15.42 million mt, 8.7% above May 2025 levels, according to the data published May 6.

Brazil's soybean exports through the first six months of 2026 are projected at 70.87 million mt, up 4.1% over the same period in 2026, according to Anec.

Brazilian FOB premiums have risen on the week amid a combination of consecutive declines in CBOT futures and firm interest on nearby July and August shipments.

Platts, part of S&P Global Energy, assessed SOYBEX FOB Santos July contract at \$450.50/mt June 3, down \$1.93/mt day over day.

Soybean meal

The association estimates that Brazil will export 1.65 million mt of soybean meal in June, virtually steady from 1.67 million mt by the same month last year.

If the current shipment-schedule-based forecast is confirmed, Brazil will accumulate exports of 12.06 million mt in the first half of the year, compared with 11.27 million mt in the same period of 2025.

Platts assessed the FOB Paranaguá soybean meal price for delivery in July at \$344.80/mt on June 3, down \$5.40/mt day over day.

Corn

Anec forecasts Brazil's May corn shipments at 281,639 mt, below last week's estimate but up from 68,400 mt a year earlier.

The association projects January-May corn exports at 5.758 million mt, up from 5.09 million mt in the same period of 2025.

Anec also expects 147,793 mt of corn to be shipped from the ports of Paranaguá and Santarém in the week ended June 6.

The expectation is that corn export volumes will start to increase in June, but the rise should be more significant from July 2026 onward, driven by the harvest progress in Brazil.

Anec estimates that Brazil will export 485,695 mt of corn in June, lower from 568,668 mt by the same month last year.

Platts assessed FOB Santos corn for August shipment at \$214.65/mt June 3, down \$3.05/mt day over day.

Anec said June projections remain subject to revision as the shipping schedule evolves.

Morocco absent from Rouen soft wheat lineup as import duty returns

- France ships 41,573 mt wheat to Africa
- Morocco reinstates 170% import duty on wheat
- Port congestion delays ships 20-30 days

A total of 41,573 metric tons of soft wheat was shipped from France's Rouen port during the week of May 28-June 3, with all listed volumes destined for Senegal and Côte d'Ivoire, according to the weekly shipping schedule by Haropa Port.

The shipment breakdown showed 14,873 mt of soft wheat bound for Dakar, Senegal; 20,700 mt for Abidjan, Côte d'Ivoire; and 6,000 mt for San Pedro, Côte d'Ivoire.

No soft wheat shipments were recorded to Morocco, a long-standing destination for French wheat, during the week. The absence of Morocco-bound cargoes coincided with the Moroccan government's temporary reinstatement of import duties on soft milling wheat, a move aimed at supporting domestic grain purchases ahead of what is expected to be one of the country's largest harvests in recent years.

According to Morocco's Customs and Indirect Tax Administration (ADII), the revised import-duty framework will be implemented in two stages. From June through July, a full import duty of 170% will apply to soft wheat imports, creating a significant barrier to overseas purchases and giving domestic producers priority access to the local market. From Aug. 1, the duty will be suspended and the zero-duty regime will return.

Moroccan authorities expect the local grain harvest to reach nearly 9 million mt, almost double last season's output, with soft wheat accounting for half of this harvest. Morocco consumes 5-6 million mt of soft wheat annually, with France as the main supplier because of the quality and shipping time of 3-5 days, a member of Morocco's National Federation of Grain and Legume Traders (FNCL) said.

With Morocco on track for a strong grain crop, the government is seeking to encourage millers and traders to prioritize wheat purchases from local farmers rather than imports.

"The goal this year is for our importers, who are also collectors, to collect 1.5 million mt from farmers," an FNCL member said.

Another challenge that has slowed grain imports into Morocco is logistical issues at the ports, which have caused delays in cargoes berthing.

Morocco had heavy rain from December 2025 to March, causing a huge backlog of ships waiting to berth at the port.

"And today, we have a congestion that means that a vessel that will come to Morocco should know that it has to wait from 20 to 30 days before berthing," the FNCL member said.

The member said the impact of congestion is low in the wheat milling sector due to sufficient soft wheat inventories, but

it is more severe in the animal feed industry, where there is no incentive to store.

Platts, part of S&P Global Energy, assessed wheat 11% FOB and CPT Rouen prices at Eur194.00/metric ton and Eur192/mt, respectively, on June 4.

Beyond soft wheat, the weekly schedule showed continued exports of other agricultural commodities such as feed barley from Rouen.

GLOBAL SOYBEAN WEEKLY: Prices pressured by futures; South America and Chinese premiums rise

- Bearish sentiment prevails among US market participants
- CFR China basis premiums rise at least 20 cents throughout week
- Cost pressures expected to limit Brazil soybean area growth

US prices plunge pressured by futures

The US soybeans market saw outright prices fall \$21.77/metric ton from June 1-5, ending the week just \$5.49/mt above Brazil's FOB Santos outright price, with a bearish sentiment prevailing among US participants.

The futures market was pressured from June 1, with CBOT July (N) futures falling 6 cents on June 1, 15.5 cents a day later, 11.25 cents on June 3, 24.5 cents on June 4, and 8 cents on June 5 to end the week at 1121.5 cents/bu.

While FOB basis remained steady throughout the week, the CIF New Orleans basis decreased 5 cents. Platts, part of S&P Global Energy, assessed SOYBEX FOB New Orleans for July shipment at \$448.82/mt on June 5, about \$21.77/mt down from June 1, while the outright price for CIF NOLA was at \$442.21/mt, \$23.61/mt down from June 1.

"I think we've finally started to trade US weather and fundamentals instead of tethering to energy and headlines," a trader in the CIF NOLA market said. "Entities that are long on commodities have started rolling their long from July to new crop this week too, so there's a lot of negative order flow from that."

Statements from the US Deputy Agriculture Secretary Stephen Vaden were published on June 2 by the Wall Street Journal, suggesting that China had started placing orders for new crop soybeans. However, sources dismissed the claims.

Platts Soybean FOB Santos, FOB Gulf, and CFR China outright prices

Source: S&P Global Energy

"I see no indication of Vaden's comments being real," a trader in the export market said. "I think the real question is: Can you think of a reason to be bullish? Pretty much all the reasons some were getting long on are not playing out this week. China isn't buying, weather is improving, etc."

CFR China flat price weakens on lower CBOT futures

The CFR China soybean market Brazilian basis premiums strengthened during the week by at least 20 cents/bu for nearby shipments, amid declining futures.

The sharpest offer indications for CFR China July shipment were at 195 cents/bu and August at 220 cents/bu over July (N) CBOT on June 5. "When CBOT futures fell, sellers withdrew their offers," a trader said. Nonetheless, up to 20 cargoes were heard traded since June 1 for old and new crop 2027 shipments.

"The latest selloff [in the futures market] was more driven by improving US weather conditions and market expectations of larger soybean planting area than previously projected by the USDA," said a Chinese soybean trader.

According to a Chinese soybean trader, as of June 2, 68% of the total open demand, at 9.8 million mt of the July shipment, has been covered.

Meanwhile, 45% of the total open demand, at 8 million mt, for the August shipment has been covered.

For the September shipment, open demand decreased to approximately 6.7 million mt, while open demand for the October shipment stands at 9 million mt.

Platts assessed the soybean CFR China M1 basis at 200 cents/bushel, over the Chicago Board of Trade July (N) contract on June 5. The soybean CFR China M1 flat price was assessed at \$487.77/mt on June 5, down \$14.23/mt week on week.

Lower CBOT pushes Brazil FOB premiums higher

The Brazilian FOB soybean market saw relatively strong buying interest, although concentrated mainly on nearby shipments, with several trades reported for July, August, and September 2026 shipments.

FOB premiums at Santos and Paranaguá rose sharply over the week, supported mainly by the significant decline in futures, according to market participants.

With the 2025-26 soybean campaign already finished, attention is turning to the upcoming 2026-27 crop, sources say. Participants in the Brazilian market expect only modest growth in planted area next season, as higher fertilizer and crop-protection costs, along with global uncertainty, limit expansion.

Another reason for concern is the likelihood of the El Niño phenomenon. If confirmed, regions of Brazil's Center-North may face delayed onset of rains, more frequent dry spells, and impacts on the development of soybean crops and, particularly, second-crop corn.

On the other hand, states in the Southern region are expected to record rainfall volumes above the historical average.

Brazil is expected to export 12.36 million metric tons of soybeans in June, down 10.4% from 13.79 million mt in the year-

ago month, according to the latest data from Anec, the Brazilian Grain Exporters Association.

Brazil's soybean exports through the first six months of 2026 are projected at 70.87 million mt, up 4.1% over the same period in 2026, according to Anec.

Platts assessed the SOYBEX FOB Santos price for July delivery at \$443.33/mt June 5, down 2.8% week over week.

GLOBAL ANIMAL FEED WEEKLY: Latin American meal prices down on the week; quiet export demand in Argentina

- Argentina's April meal exports fall short of forecast
- EU soybean meal prices fall as supply increases
- Low export demand and more production pressure US DDGS

South American soybean meal

South American soybean meal FOB prices fell in a week shortened by local holidays and reports of weak export demand in Argentina.

On June 5, Platts assessed the Argentine soybean meal FOB Up River outright price for July dates at \$331.24/metric ton, down 6.9% week over week. The Brazilian FOB Paranaguá value for the same loading decreased 6.1% to at \$333.45/mt in the same comparison.

A holiday on June 4 contributed to partially thinning the market, while participants highlighted limited buying appetite for Argentine meal amid prices considered higher. Throughout the week, FOB Up River port differentials weakened, which put buyers in a wait-and-see position.

In this context, Argentine soybean meal exports totaled 2.50 million mt in April, according to the Ministry of Economy, falling short of S&P Global Energy CERA's forecast of 2.80 million mt.

"Delayed harvests limited soybean supplies, while strong corn export demand may have constrained soybean product exports," CERA analysts said.

In Brazil, some activity was recorded in the FOB Paranaguá paper market for August shipments.

Meanwhile, soybean farmer sales in Brazil for the current 2025-26 crop reached 64% of production by the end of May, while negotiations for the 2026-27 cycle continued to advance slowly, accounting for 11% of the anticipated output, according to CERA data.

EU soybean meal

EU soybean meal prices fell due to ample supply from South America, mainly Brazil, traders and brokers in Europe reported.

On June 5, Platts, a part of S&P Global Energy, reported the EXW Spain soybean meal price at Eur355/mt, a decrease of Eur16/mt from the previous week. Meanwhile, FOB Netherlands was at Eur360/mt, down Eur5/mt, wow.

The decline was due to ample supply, with several shipments from South America arriving at Spanish ports, according to Spanish traders.

“Although there is enough supply for June,” one trader noted, “July prices are discounted compared to June.”

The market shows a Eur6/mt spread between June and July prices, as more supply is expected in July.

Procurement managers mentioned that falling prices and higher projected volumes could further impact the Spanish market.

“Demand is weak now, and supply is tighter in June compared to July,” said a Dutch trader.

US DDGS

The US DDGS market saw pressure on outright prices throughout the week that ended on June 5, caused by the end of the plant maintenance season, low export demand, and competition from other feeding ingredients.

Platts assessed CIF New Orleans dried distillers grains with solubles barges for the June shipment period at \$211/short ton on June 5, the Chicago DDGS truck market for the same delivery period at \$186/st, and the Southern California rail market for the June delivery period at \$231/st.

From June 1 to June 5, the CIF New Orleans market fell \$12/st, Chicago trucks \$10/st, and the South California rail market decreased \$6/st.

Increased production at the end of the plant maintenance season, combined with low export demand have been behind the decreases, sources say.

“I’m hearing exports getting quiet,” a trader said. “More production available as well.”

Competition from other feeding ingredients is also lowering US DDGS prices.

“Freight is still high,” a third trader said. “Flat price remains high compared to other ingredients. Soybean meal also fell a lot on June 4, pressuring DDGS.”

“Seems like things are inching lower each day,” another trader said. “The CBOT weakness in soybean meal probably contributed.”

Ethanol production increased week over week, with 1.108 million barrels or 46.53 million gallons of ethanol produced daily during the week that ended on May 29, data from the US Energy Information Administration released on June 3 shows.

This is 19,000 b/d more than the previous week but 3,000 b/d per day less than the week that ended on May 15.

Assessment Rationale

Grains

Platts Ags EMEA Wheat Daily Rationale

Platts assessed the Milling Wheat Marker at \$242.25/metric ton on June 5, unchanged from the previous assessment. Ukraine 11.5% handysize wheat, assessed at \$236/mt, was normalized to the nearest 25 cents of \$242.25/mt when adding May's quality normalization of \$6.15/mt, to account for its lower protein content, was the most competitive wheat out of the three components of the Milling Wheat Marker, which also includes CVB 12.5%, assessed at \$244/mt, and Russian 12.5% wheat assessed at \$244/mt on the day. This reflects the Platts assessment window from July 3-17.

Platts assessed Black Sea wheat (Russian deepsea, 12.5% protein) down by \$3/mt at \$241/mt on June 5 amid low demand, below an offer at \$242/mt. This reflects the Platts assessment window from July 3-17.

Platts assessed Black Sea wheat (Ukraine deepsea, 11.5% protein) unchanged at \$236/mt on June 5, above a bid at \$234/mt and below an offer for July at \$237/mt. This reflects the Platts assessment window from July 3-17.

Exclusions: No market data was excluded from the June 5 Black Sea wheat assessments.

Platts Argentina Corn FOB Up River Daily Rationale

Platts assessed corn FOB Up River for loading in July at \$198.23/metric ton on June 5, down \$2.36/mt from the previous assessment on June 3.

The assessment considered the FOB premium for Up River July-loading cargoes 8 cents/bushel higher at plus 86 cents/bu to Chicago Board of Trade July (N) corn futures, based on higher bids heard at N plus 85 cents/bu and higher offers heard at N plus 90 cents/bu at the market close.

Platts is part of S&P Global Energy.

This rationale applies to symbol(s) <ARGCA00> <ARGCB00>.

Platts Brazil Corn Daily Rationale

Platts assessed the Brazilian corn FOB Santos price for August loading at \$209.44/metric ton on June 5, \$5.21/mt lower than the previous assessment on June 3.

The assessment considered the FOB Santos basis for August loading cargoes unchanged at plus 105 cents/bu to the Chicago Board of Trade September (U) contract, based on lower bids for August H2 loading at U plus 101 cents/bu at the market close. Neither offers or bids for full August loading were heard during the day.

Platts is part of S&P Global Energy.

This rationale applies to symbol(s) <ABCSA00> <ABCSB00>

Platts US Corn Daily Assessment Rationale

Platts assessed the US Yellow Corn No. 2 CIF New Orleans barge basis for June shipment at 77 cents/bushel over the CBOT July (N) corn futures contract on June 5, a decrease of 4 cents from the previous business day. This was based on an offer heard at 78 cents/bu. A bid was heard at 80 cents/bu early in the day, but discounted as offers dropped throughout the day.

Platts assessed the US Yellow Corn No. 2 CIF New Orleans barge basis for July shipment at 85 cents/bu over the Chicago Board of Trade July (N) corn futures contract on June 5, down 3 cents from the previous assessment. This was based on a trade heard at 85 cents/bu. A trade was heard earlier in the day at 86 cents/bu, but discounted as sources reported weaker market sentiment, with bids and offers also falling throughout the day.

Platts assessed the US Yellow Corn No. 2 FOB Gulf basis for August shipments at 96 cents/bu over the CBOT September (U) corn futures contracts on June 5. Offers were heard at 99 and 100 cents/bu, for the first and second half of August, respectively.

No information was excluded.

Platts is part of S&P Global Energy.

This rationale applies to symbol(s) <WCNOE00> <WCNOU00>.

Platts FOB Black Sea Corn Daily Assessment Rationale

Platts assessed Ukrainian corn unchanged at \$236/metric ton June 5, below an offer at \$237/mt for July loading. The structure between the first and second halves of July was assessed flat. This reflects the Platts assessment window from July 3-17.

Exclusions: No market data was excluded from the June 5 Black Sea corn assessment.

Platts is part of S&P Global Energy.

Animal Feed and Protein

Platts Argentina Soybean Meal Daily Rationale

Platts assessed the Argentine soybean meal FOB Up River price for July loading at \$331.24/metric ton on June 5, \$12.46/mt lower than the previous assessment on June 3.

The basis for July loading in the Up River cargo market was assessed \$1/short ton higher at minus \$8/st to the July (N) futures at the Chicago Board of Trade. The assessment considered an indicative value heard at that level, steady bids at minus \$10/st and higher offers at minus \$6/st to the CBOT N contract at the market close.

Platts is part of S&P Global Energy.

Platts Brazil Soybean Meal Daily Rationale

Platts assessed the Brazilian soybean meal FOB Paranaguá price for July loading at \$333.45/metric ton on June 5, \$11.35/mt lower than the previous assessment on June 3.

The basis for July loading in the Paranaguá paper market was assessed \$2/short ton higher at minus \$6/st to the July (N) futures at the Chicago Board of Trade. The assessment considered higher bids at minus \$7/st and higher offers at minus \$5/st to the CBOT N contract at the market close.

Platts is part of S&P Global Energy.

Platts US Dried Distiller Grains DDGS Daily Assessment Rationale

Platts assessed CIF New Orleans dried distillers grains with solubles barges for the June shipment period at \$211/short ton on June 5, down \$4/st from June 4 based on a trade heard at \$210/st, which became the bid level, and an offer at \$212/st.

The Chicago DDGS truck market for the June delivery period was assessed at \$186/st, unchanged from June 4, based on a bid heard at \$185/st and an offer at \$195/st.

The South California rail market for the June delivery period was assessed at \$231/st, unchanged from June 4 on no disproving information.

No information was excluded.

Platts is part of S&P Global Energy.

This rationale applies to symbols <ACDDG00> <AADDG00>.

Vegetable Oils.

Platts Asia Palm Oil Daily Rationale

Platts assessed CPO CFR WC India price at \$1,230/metric ton June 5 for June loading, down \$5/mt from June 4, below an offer and above a bid.

CPO offer was heard at \$1,245/mt and an indicative bid at \$1,225/mt on a CFR WC India basis, shipping in June.

July shipment of CPO CFR WC India was at \$1,235/mt June 5, down \$5/mt from June 4, considering a \$5/mt carry between June and July.

Platts assessed CPO FOB Indonesia price at \$1,182.5/mt June 5 for June loading, down \$5/mt from June 4, below an offer and above a bid.

CPO offer was heard at \$1,192.5/mt and an indicative bid at \$1,172.5/mt on a FOB Dumai basis, shipping in June.

July shipment of CPO FOB Dumai was at \$1,187.5/mt June 5, down \$5/mt from June 4, considering a \$5/mt carry between June and July.

Platts assessed the RBDPS FOB Indonesia price at \$1,077.5/mt June 5 for June loading, down \$22.5/mt from June 4, below an offer and above a bid.

RBDPS offer was heard at \$1,092.5/mt and an indicative bid at \$1,067.5/mt on a FOB Dumai basis, shipping in June.

July shipment of RBDPS FOB Dumai was at \$1,082.5/mt June 5, down \$22.5/mt from June 4, considering a \$5/mt carry between June and July.

Platts assessed the PFAD FOB Indonesia price at \$992.5/mt June 5 for June loading, down \$7.5/mt from June 4, below an offer and above a bid.

PFAD offer was heard at \$1,007.5/mt and an indicative bid at \$977.5/mt on a FOB Dumai basis, shipping in June.

July shipment of PFAD FOB Dumai was at \$997.5/mt June 5, down \$7.5/mt from June 4, considering a \$5/mt carry between June and July.

Platts is part of S&P Global Energy.

Platts Argentina Soybean Oil Daily Rationale

Platts assessed the Argentine soybean oil FOB Up River price for July loading at \$1,160.07/mt June 5, down \$17.42/mt from the last assessed price on June 3. The basis for July loading in the Up River paper market was assessed 380 points higher at minus 2,150 points to the July (N) futures at the Chicago Board of Trade. The assessment considered an indicative value last heard at that level, offers at minus 1,970 points and bids at minus 2,280 points to the CBOT N contract at the market close. No trades were confirmed before the market close for July loading in the FOB Up River paper market June 5.

Platts is part of S&P Global Energy.

This rationale applies to symbol(s) <SYOAA00> <SYOAB00>

Platts Brazil Soybean Oil Daily Rationale

Platts assessed the Brazilian soybean oil FOB Paranaguá price for July loading at \$1,166.69/mt June 5, down \$28.44/mt from the last assessed price on June 3. The basis for July loading in the Paranaguá paper market was assessed 330 points higher at minus 2,120 points to the July (N) futures at the Chicago Board of Trade. The assessment considered an indicative value last heard at that level, bids at minus 2,230 points and offers at minus 1,950 points to the CBOT N contract at the market close. No trades were confirmed before the market close for July loading in the FOB Paranaguá paper market June 5.

Platts assessed the Brazilian soybean oil FOB Paranaguá price for August loading at \$1,177.93/mt June 5, down \$19.84/mt from the last assessed price on June 3. The basis for August loading in the Paranaguá paper market was assessed 330 points higher at minus 1,970 points to the August (Q) futures at the Chicago Board of Trade. The assessment considered an indicative value

last heard at that level. No bids, offers or trades were confirmed before the market close for August loading in the FOB Paranaguá paper market June 5.

Platts is part of S&P Global Energy.

This rationale applies to symbol(s) <SYOBB00> and <SYOBA00>.

Platts Europe Sunflower Oil Daily Rationale

Platts assessed sunflower oil FOB Black Sea Ukraine for July-loading down \$5 on June 4 at \$1,374/mt, below the offer within a bid-offer range heard at \$1,365-\$1,375/mt.

This rationale applies to symbol(s) <SFWBL00>
