Commentary and Analysis

Wheat

Platts European Wheat Daily Commentary

- Russian wheat prices rise
- Marmara coaster prices fall
- Ukraine exports drop 14% YOY

The Russian wheat market strengthened marginally June 19, with a buyer observed at a competitive level. However, the CIF Marmara 12.5% coaster market weakened as offers for the old crop declined. Traders said new crop offers were even lower amid slower demand.

A broker from Turkey said that the Turkish Grain Board, or TMO, had announced new crop prices at Lira 16,500/metric ton for wheat. "Domestic buyers are not very active at the moment. There are only a few inquiries in the market, and buying interest remains limited," the broker said.

Meanwhile, the Ukrainian and Constanta-Varna-Burgas markets remained sluggish, with demand staying lackluster. CVB sellers said demand was low, except for Algerian purchases. "Demand is low, with the exception of Algeria," a seller from Romania said.

In Ukraine, 13.4 million mt of wheat were exported as of June 19 in MY 2025-26, down 14% from last year's volume, according to the State Customs Service.

Prices in the French wheat market ended lower during the day, with both FOB and CPT levels weakening by Eur2-3/mt.

A French-based broker said the market was focusing on hot temperatures expected by the end of June. "France will be even hotter. Wheat is out of the critical window, so we do not expect much impact," the broker said.

Platts Asia Wheat Daily Commentary

- Australian wheat eases
- South Korea buys feed wheat June 18

Australian Premium White and Australian Standard White, with no protein guarantee, both fell \$1/mt day over day June 19 to \$275/mt and \$270/mt FOB, respectively, tracking lower value indications and bearishness from a weaker Australian dollar through the week.

The Australian dollar dipped below 70 US cents several times throughout the week and was trading at 70.1 cents at 1630 SGT (0830 GMT), down 0.84% from the start of the week June 15.

More rain is in the forecast over the coming eight days across Australia's wheat belt, based on the Bureau of Meteorology's forecast June 19.

After two cargoes of feed wheat traded to South Korea late June 17, another buyer entered the market late June 18 and

purchased one feed wheat cargo at \$277.60/mt CFR in a private deal, according to several Asian grains traders.

The cargo was traded for Oct. 20 arrival and will likely be delivered from European or Black Sea ports, said the same traders.

Platts is part of S&P Global Energy.

Corn

Platts Asia Corn Daily Commentary

- US PNW basis rises to 155 cents/bu (U) CBOT for Sep shipment
- Brazilian, Argentine corn Aug shipments more competitive than US PNW

Asian corn prices reversed a three-day increment June 19 and fell \$1.5/metric ton amid low liquidity as buyers were quiet, while sellers did not offer on the Juneteenth and Dragon Boat festival holidays.

Platts assessed feed-quality corn CFR Northeast Asia down \$1.5/mt day over day at \$259/mt for cargoes arriving over Sept. 17-Oct. 17.

US Pacific Northwest corn basis offer indications for September shipment were sharply higher at 155 cents/bu over September (U) Chicago Board of Trade futures contract amid a lack of available supplies on the US Juneteenth holiday and anticipated tighter export capacity resulting from the resumption of US soybeans exports to China.

"September export capacities are somehow well sold for corn, this is why it is hard to find September corn offers ex PNW. The soybeans program ex PNW will further elevate corn and wheat prices for the region," said a US-based trader.

Meanwhile, Brazilian and Argentine corn August shipments became more competitive than US PNW corn, with normalized offers for Brazilian corn at \$260.54/mt CFR South Korea, while US PNW corn was indicatively offered at \$266.43/mt CFR after accounting for basis premiums and freight.

Platts Corn Arbitrage Price Matrix also showed replacement values on a CFR Northeast Asia basis to be at \$261.82/mt CFR for Argentina-origin corn, while US PNW values were at \$264.4/mt CFR.

Although South Korean feed millers did not bid for any corn cargoes June 19, a local trade agent said two feed milling groups were targeting \$257/mt CFR levels for deals and were likely to return in the following week ending June 26.

Regarding the Japan feed market, a Singapore-based trader said Japanese buyers had purchased August/September shipments from US PNW over the previous few weeks, but did not complete September shipments coverage.

"They will most likely turn to South America corn supply to make up for the deficit, although the Japanese also own some terminals in the US and thus can get a stable flow of US corn in some way," said the trader.

Platts is part of S&P Global Energy.

Platts Latin America Corn Daily Commentary

- Argentine FOB Up River premiums rise
- Brazil FOB Santos prices hold steady
- Rio Grande do Sul harvest reaches 99%

Platts, part of S&P Global Energy, assessed Latin American FOB corn prices as mixed on June 19, with FOB Santos prices steady and FOB Up River prices higher, even though the Chicago Board of Trade was closed for the US Juneteenth holiday.

Argentine FOB Up River premiums for August loading increased day over day amid higher bids and offers compared with the previous session.

In Brazil, the US market closure resulted in a lack of clear bids and offers for FOB Santos August loading.

The US dollar to Brazilian real exchange rate stood at Real 5.1543/\$1 as of 5:30 pm Brasilia time, down 0.60% day over day.

In Brazil's domestic market, prices remained steady in the Sorriso, Rio Verde, and Maringá regions.

"The US holiday also reduces activity in the domestic market," a broker said.

The Technical Assistance and Rural Extension Agency reported on June 18 that the summer corn harvest in Rio Grande

do Sul state has reached 99% of the area. This is a 1 percentage point increase from the previous week, higher than the 98% recorded last year, and above the five-year average of 96%.

Platts European Corn Daily Commentary

- Black Sea corn stable with slow demand
- Ukraine exports fall 5% vs prior season

The Black Sea corn market remained stable on day June 19. In the FOB market, the competitive offer for July loading held at \$230/mt, with no firm buying ideas for FOB.

In the CIF market, offers for CIF Marmara remained relatively stable. There are several pockets of demand around \$240/mt for CIF Marmara, a broker from Turkey said.

“Not too much, but there will be a buying spree, especially for July 1-15. Maybe we will not see demand today; buyers might chase spot loadings in July,” the broker added.

“There are probably lots of purchases already made, but not loaded yet—some H2 June FOB for Turkey, some H1 July CIF,” another market participant from Turkey said, adding this as the reason for weak demand for July loading.

In Ukraine, according to the State Customs Service, 20.5 million mt of corn were exported so far in the MY 2025-26 as of June 19, which is 5% less than shipments in the previous season.

On the day, buyers were also seen for coaster cargoes of FOB POC.

Coaster offers have dropped by more than \$20/mt over the past three weeks, a coaster importer from Greece said.

“Demand is weak; the dollar/euro ratio is bad for imports. I hear very low prices for corn,” the importer said.

Oilseeds

Platts Asia Soybean Daily Commentary

- China participants away on holiday
- US-Iran peace deal impact limited: source

Platts assessed the CFR China soybean month-one August shipment down \$2.66/metric tons day over day at \$493.38/mt on June 19, while the basis was unchanged at 215 cents/bu over Aug (Q) Chicago Board of Trade futures.

Overnight, the CFR China market was largely muted as China and US market participants are away on holiday.

China-based soybean trade sources said the market is likely to be driven by supply-side factors over the next few weeks.

“The US weather conditions in the soybean cropping regions are seen as favorable, and the market would shift focus back to soybean market fundamentals,” said a China-based soybean trader.

Following news of the US-Iran peace deal, China-based soybean trade sources said easing crude oil prices could exert near-term pressure on CBOT soybean futures and the downside impact is expected to be limited.

“It will mainly impact the US soybean oil market, but the US biodiesel demand is mandated and factored in,” said the China-based trader, adding that any near-term bearishness would be little, as there is not much room for futures to fall.

Platts Brazil Soybean Daily Commentary

- CBOT closed due to US holiday
- Mato Grosso soybean farmers brace for challenging 2026-27 season

Brazilian soybean FOB prices remained unchanged on June 19, while the Chicago Board of Trade closed for the Juneteenth holiday in the US.

Platts assessed the SOYBEX FOB Santos first-month July shipment price unchanged at \$451.69/metric ton on June 19.

The upcoming 2026-27 soybean crop in Mato Grosso is expected to be more challenging, with higher costs, tighter rural credit and growing climate uncertainty, with potential to have a strong impact on yields, according to sources.

According to a report by Senar-MT and the Mato Grosso Institute of Agricultural Economics, weather remains the main risk for the next crop season, while limited access to financing is already forcing producers to adjust their technological packages. At the same time, production costs are rising, with soybean expenses estimated at Real 4,315.29/hectare, up 3.21% from the previous season, driven mainly by fertilizers and soil amendments, which increased by 5.40%, as well as crop protection products, which rose by 10.97%.

As a result, the break-even point needed to cover production costs has climbed by 9.13% compared to 2025-26. With margins tightening, producers are focusing on securing remaining inputs to complete their planting plans while also refining their marketing strategies for the upcoming harvest, amid elevated costs and heightened climatic and financial uncertainty, Imea said.

Trading activity was muted in the Paranaguá and Santos soybean markets, with no offers or bids heard on the day.

The US dollar versus the Brazilian real settled at Real 5.1531/\$1 at 4:30 pm Brasilia time.

Platts Latin America Soybean Meal Daily Commentary

- Argentine labor strike concerns limit exports
- Brazil soybean harvest reaches 100% completion

Latin America FOB corn markets were quiet on June 19, as the Chicago Board of Trade was closed for the Juneteenth holiday.

Argentine FOB Up River premiums for July loading and Brazilian FOB Paranaguá premiums for August loading were unchanged amid an absence of clear bids and offers during the day.

In its Global Soybean Complex short-term outlook published on June 18, CERA analysts noted concerns about a potential labor strike in Argentina's Rosario oilseed corridor, keeping market participants cautious about export activity after July.

Brazil's 2025-26 soybean harvest has finished the estimated area, as of June 12, according to data published by Brazil's

Platts European Animal Feed Daily Commentary

- Dutch soybean meal drops Eur4/mt amid lower CBOT
- Spanish corn prices firm Eur3/mt amid freight costs
- Slow trading activity reported across Europe

Northern Europe

The Dutch soybean meal market was bearish during the week ending June 19.

Platts assessed FOB Netherlands at Eur345/mt on June 19, down Eur4/mt week over week.

According to a Dutch trader, the activity in the market is very slow, with few trades reported during the week.

"The market went down during the lower CBOT," another trader said.

Southern Europe

The Spanish feed market was mixed during the week ending June 19.

Platts assessed EXW Spain soybean meal remained steady week over week at Eur344/mt June 19, while Corn EXW Spain was at Eur219/mt, Eur3/mt firmer week over week.

A trader in Spain noted that initial lower FOB US offers led to reduced prices at the start of the week. However, prices faced upward pressure later on due to high CBOT levels.

Brokers and buyers indicated that currency exchange fluctuations and increased freight costs have also driven up corn offers and trading activity.

Spanish traders and brokers reported a quiet market with limited trading and activity.

Additionally, another Spanish trader stated that port supplies remain ample because no new vessels have recently arrived from Brazil.

Vegetable Oils

Platts Asia Palm Oil Daily Commentary

- Palm oil futures surge on supply concerns
- Indian demand stays slow amid soybean arrivals

The Asian palm oil market surged June 19, with palm oil futures on Bursa Malaysia Derivatives rising amid supply concerns related to Indonesia's upcoming B50 biodiesel mandate implementation, along with the coming El Niño's impact on lower production.

The benchmark palm oil contract for September delivery on the Bursa Malaysia commodity exchange rose MR72/metric ton to MR4,645/mt June 19.

Indian market remained slow, with one trade done at \$1,222.50/mt to East Coast India for July shipment.

"India is not aggressive on buying, as a high volume of soybean oil cargoes is expected to arrive in July-September," an India-based trader said.

Platts assessed CPO CFR WC India at \$1,235/mt June 19 for July loading, up \$2.50/mt from June 18, while August shipment was \$7.50/mt higher than July.

"Demand for Indonesian CPO is weaker, as it is priced at a premium of about \$20/mt over Malaysian CPO, leading buyers to prefer purchasing from Malaysia," a Malaysia-based trader said.

Platts assessed CPO FOB Indonesia at \$1,200/mt June 19 for July loading, up \$10/mt from June 18, while August shipment was \$10/mt higher than July.

Platts assessed RBDPS FOB Indonesia at \$1,075/mt June 19 for July loading, up \$5/mt from June 18, while August shipment was \$10/mt higher than July.

Platts assessed PFAD FOB Indonesia at \$1,005/mt June 19 for July loading, up \$10/mt from June 18, while August shipment was \$10/mt higher than July.

Physical FOB values in Brazil and Argentina stayed comparatively stable, while basis levels continued to recover from the record discounts recorded earlier in June.

CBOT July soybean oil futures settled at 74.28 cents/pound on June 12, before falling to 69.69 cents/lb on June 18, a decline of 6.2% over the period. The CBOT closed on June 19 in observance of the Juneteenth holiday in the US.

Market participants said futures remained under pressure from favorable US crop conditions, expectations for ample global soybean supplies, and continued liquidation across agricultural commodity markets following the rally to multiyear highs earlier in June.

Despite the weakness in futures, physical soybean oil values in South America moved within a relatively narrow range.

In Argentina, Platts-assessed soybean oil FOB Up River prices for July loading eased from \$1,174.62/metric ton on June 12 to \$1,168.23/mt on June 18. In Brazil, FOB Paranaguá soybean oil prices for July loading moved from \$1,194.47/mt to \$1,192.48/mt over the same period, while August-loading values edged higher from \$1,165.36/mt to \$1,166.91/mt.

Market participants said the stability of FOB values highlighted the growing divergence between volatile US soybean oil futures and South American physical export markets.

While CBOT soybean oil futures remained heavily influenced by US crop conditions, speculative positioning, renewable diesel demand expectations, and biofuel policy, South American markets continued responding more directly to physical supply availability, export demand, freight economics, and competition from other vegetable oils.

FOB soybean oil basis levels strengthened sharply in the week to June 19, as weaker futures allowed export premiums to recover further from historically discounted levels. Argentina FOB Up River July basis improved from minus 2,100 points to minus 1,670 points relative to CBOT July futures between June 12 and June 18. Brazil FOB Paranaguá July basis strengthened from minus 2,010 points to minus 1,560 points, while August basis improved from minus 2,000 points to minus 1,550 points.

Traders said the basis recovery was driven primarily by the decline in CBOT soybean oil futures rather than a major change in underlying South American export fundamentals. Physical markets remained well supplied, supported by record soybean production and crush expectations in Brazil, as well as abundant regional soybean oil availability.

Trading activity was subdued throughout much of the period. Argentina's soybean oil market was largely inactive on June 15 due to the holiday in observance of the Paso a la Inmortalidad del General Martín Miguel de Güemes, and liquidity remained limited in subsequent sessions. Domestic soybean oil activity in Brazil was also described as slow.

Market participants also continued to monitor uncertainty surrounding a possible labor strike by oilseed workers in Argentina. Although no major disruptions to soybean oil export flows had been reported, traders said the potential for labor action in the Rosario export corridor prompted a cautious approach among buyers and sellers.

Platts Europe Vegetable Oil Daily Commentary

- Crude oil weakness pressures vegetable oil markets
- Traders delay purchases amid falling prices
- Market participants expect buyers to return once prices stabilize

European vegetable oil markets moved lower, with rapeseed oil recording significant declines across the curve while sunflower oil softened marginally.

FOB Black Sea sunflower oil fell \$2/mt to \$1,379/mt, while RSO FOB Dutch Mills front-month declined Eur 11 to Eur 1,144/mt. Second, third and fourth positions also weakened by Eur 12, Eur 7 and Eur 10, respectively. The broad-based sell-off reflects increasing pressure from external commodity markets rather than a material deterioration in underlying vegetable oil fundamentals.

According to a source based in Russia, "markets are under pressure of falling crude oil and beanoil / CBOT." The decline in energy markets and soybean oil futures is weighing on sentiment across the vegetable oil complex, particularly in rapeseed oil, where biodiesel economics remain closely linked to broader

energy markets. The same source noted that “buyers are in pause or show slow buying interest,” highlighting the reluctance of consumers to actively participate while prices remain under pressure and market direction remains uncertain.

Despite the recent weakness, market participants do not appear to expect a prolonged collapse in sunflower oil values. A trader based in India stated that “old-crop sunflower oil prices are unlikely to decline further,” adding that “any meaningful correction may only be expected during September.” This suggests that tight old-crop availability continues to provide support beneath the market, even as broader commodity markets move lower. The source also highlighted the potential for additional demand from the Middle East and Egypt, where tenders for new-crop sunflower oil could emerge if regional stability improves and eastbound shipping flows normalize.

Looking ahead, market participants remain focused on the return of buying activity once markets stabilize. According to the source based in Russia, “we need to see some stability and then buyers will return to the market.” For Europe, the current weakness appears driven more by macroeconomic and futures-led pressures than by any significant change in physical supply and demand balances. While lower crude oil and soybean oil prices are weighing on rapeseed oil, sunflower oil continues to benefit from relatively tight old-crop availability and ongoing geopolitical uncertainty surrounding Black Sea exports.

Platts is part of S&P Global Energy.

Argentina maintains MY 2025-26 corn outlook; weather slows harvest

- Argentina holds MY 2025-26 corn output at 70 million mt
- Wet weather slows harvest to 58% completion
- MY 2025-26 corn exports projected up 52% YOY

Argentina maintained its corn production forecast for the marketing year 2025-26 (March-February) at 70 million metric tons in June, up 35.4% year over year, the Secretariat of Agriculture, Livestock and Fisheries said in a June 18 report.

Estimates for corn-planted area remained unchanged at 11.4 million hectares, reflecting a 23.9% year-over-year increase.

Harvesting continues to progress at a moderate-to-slow pace due to adverse weather conditions, including rainfall and high moisture levels, the report said.

Harvesting of early-planted corn is complete, with work now focused on late-planted crops.

At the national level, harvesting operations cover 58% of the total planted area.

According to the report, yield levels have stabilized, and no significant changes are expected.

The latest report from the national monitoring network for *Dalbulus maidis* indicates heterogeneous pest behavior across regions, with higher pressure concentrated in Northwest Argentina, Northeast Argentina and the Central-North production regions.

Argentina's corn exports for MY 2025-26 are projected at 44 million mt, a 52.2% increase from the previous year, accounting for the bulk of demand.

Domestic consumption is estimated at 21.3 million mt, including 18 million mt for feed use and 3.3 million mt for processing and other uses.

Ending stocks for MY 2025-26 were also maintained at 8.41 million mt in June, marking a sharp 127% increase year over year.

S&P Global Energy CERA, on June 18, forecast Argentina's corn production for MY 2025-26 at 64 million mt, up from 49 million mt in the previous year.

Corn exports for MY 2025-26 were projected at 44 million mt, 51.2% higher year over year.

The US Department of Agriculture, in its World Agricultural Supply and Demand Estimates report published on June 11, estimated Argentina's corn production for MY 2025-26 at 61 million mt, up from 49 million mt in the previous year.

Corn exports for MY 2025-26 were projected at 43 million mt, up 47.9% year over year.

Platts, part of S&P Global Energy, assessed Argentine corn FOB Up River at \$200.89/mt on June 18, down \$1.67/mt day over day.

Thailand set to extend corn import window by two months

- Thailand extends corn import window to end-Aug
- Domestic Thai corn prices reach \$370-\$400/mt

Thailand is set to extend its tariff-free feed corn import period under the ASEAN Free Trade Area (AFTA) from Feb. 1 to June 30 by two months until Aug. 31, Deputy Government Spokesperson Lalida Periswiatana from the Prime Minister's Office said June 18.

Lalida also stated the decision to extend the import window was to help ensure sufficient feed supplies, ease pressure on raw material prices and reduce livestock production costs while maintaining food security and protecting domestic farmers' incomes.

Thailand imports about 1.57 million mt of feed corn per year while producing about 5 million mt annually, according to local media reports.

Meanwhile, according to customs data from S&P Global Market Intelligence's Global Trade Atlas, Thailand imported a total of 1.47 million mt of feed corn in 2025, with 1.24 million mt from Myanmar and about 0.21 million mt from Laos.

Thailand corn imports

However, market participants in the grain industry note that Thailand's key supplier, Myanmar, will see a significant decline in corn production in 2026, with one Myanmar feed miller estimating about a one-third decline year over year.

The US Department of Agriculture Foreign Agricultural Service estimates Thailand's marketing year 2025-26 (September 2025-August 2026) corn production to be at 5.4 million mt, while corn imports were projected at 1.7 million mt.

Meanwhile, the USDA forecasts Myanmar's corn production to decline by about 10% year on year "due to high production costs and reduced cultivation area," and reach 2.45 million mt compared with the previous year's production of 2.7 million mt.

A second Singapore-based trader said that the initial limit to the import window of February to June was "to make the local farmers happy, and they did achieve what they intended [by bringing up domestic corn prices]."

Thai domestic corn prices were reported at 12.05-13.2 Baht/kg on a delivered to mill basis (\$370-\$400/mt), while Myanmar corn

import prices were reported at Baht 12.1/kg ex-warehouse (\$375/mt CFR Thailand), according to a Thai grains broker.

Platts, part of S&P Global Energy, assessed feed quality corn CFR Northeast Asia down \$1.5/mt at \$259/mt June 19 for cargoes arriving over Sept. 17 to Oct. 17.

UKRAINE DATA: Grain exports fall in MY 2025-26 as of June 19

- July 1-June 19 Corn exports down 5% on year
- MY 2025-26 wheat export forecast at 12 mil mt
- MY 2025-26 corn exports seen at 22.2 mil mt

Ukraine's wheat exports during the marketing year 2025-26 (July-June) totaled 13.4 million metric tons as of June 19, down 14% year over year, according to the Ministry of Agrarian and Food Policy.

Over June 1-19, the country exported 863,000 mt of wheat, up from 669,000 mt shipped during the same period last year.

In MY 2024-25, Ukrainian wheat exports totaled 15.7 million mt.

S&P Global Energy CERA forecast Ukraine's wheat production for MY 2025-26 at 24.1 million mt. Wheat exports for the season are projected at 12 million mt.

Platts, part of S&P Global Energy, assessed Ukrainian 11.5% wheat FOB Black Sea at \$233.5/mt on June 18, down \$0.5/mt day over day.

Corn exports decline

Ukrainian corn shipments stood at 20.5 million mt in MY 2025-26 as of June 19, down 5% year over year, ministry data showed.

Over June 1-19, about 1.19 million mt of corn was exported, up from 989,000 mt in the same period of last year.

In MY 2024-25, Ukraine corn exports totaled 21.2 million mt.

CERA forecasts Ukrainian corn production for the current season at 30.9 million mt, while exports are seen at 22.2 million mt.

Platts assessed Ukraine corn FOB Black Sea at \$229/mt June 18, unchanged day over day.

South America soybean oil basis rebounds despite weak CBOT futures

- CBOT futures fall 12% while FOB stays stable
- Physical markets resist futures volatility

A sharp correction in Chicago Board of Trade soybean oil futures in June has highlighted a growing divergence between US futures markets and South American physical soybean oil fundamentals.

CBOT July soybean oil futures fell nearly 12% between June 1 and June 18, declining from a multiyear high of 79.09 cents/lb to settle at 69.69 cents/lb. Over the same period, soybean oil FOB values in Brazil and Argentina remained remarkably stable, while export basis levels recovered by nearly 1,000 points from the record discounts recorded at the beginning of the month.

Market participants, including Brazil-based soybean oil traders, said the contrasting price movements demonstrate how recent soybean oil futures volatility has been driven largely by developments within the US market, while physical export markets in South America have continued to reflect comparatively steady supply and demand fundamentals.

Futures market undergoes sharp correction

CBOT soybean oil futures reached their highest levels since 2022 on June 1 amid strong renewable diesel demand expectations, supportive US biofuel policy developments and one of the strongest July/December inversions seen in recent years.

CBOT Soybean oil front month futures contract

However, sentiment shifted quickly in the first half of June.

Market participants pointed to favorable US crop conditions, expectations for abundant global soybean supplies and profit-taking following the powerful rally that carried soybean oil futures to multiyear highs.

The latest Commitments of Traders report from the US Commodity Futures Trading Commission provides evidence that speculative liquidation contributed significantly to the early stages of the correction. In the week ended June 9, Managed Money reduced its net long soybean oil futures and options position by around 25,000 contracts, equivalent to around 16% of its previous net-long exposure.

Additional CFTC positioning data covering the period after June 9 will not be released until 3:30 pm ET on June 19. As a result, market participants said it remains too early to determine the extent to which speculative liquidation continued during the second half of the selloff.

Nevertheless, the result was a nearly 12% decline in front-month soybean oil futures between June 1 and June 18.

FOB soybean oil values remain resilient

While soybean oil futures experienced substantial volatility, physical soybean oil values in South America remained comparatively stable.

Platts-assessed Argentine soybean oil FOB Up River values stood at \$1,181.46/mt on June 1 and were assessed at \$1,168.23/mt on June 18, a decline of just over 1%. Platts is part of S&P Global Energy.

Platts South American Soybean Oil

Similarly, Brazilian soybean oil FOB Paranaguá values were assessed at \$1,195.13/mt on June 3, the highest assessment over the period, and stood at \$1,192.48/mt on June 18.

The stability of FOB values contrasts sharply with the 12% decline in CBOT soybean oil futures and suggests that physical export markets continued receiving support from underlying vegetable oil fundamentals.

Market participants said South American soybean oil markets continued to benefit from steady export demand, firm global vegetable oil values and relatively stable export economics despite the weakness in US futures.

Physical soybean oil values also remained supported by domestic consumption. Brazil's B15 biodiesel mandate continues to absorb a significant portion of domestic soybean oil production, helping support demand despite record soybean supplies.

The resilience of FOB values is particularly notable given the massive soybean production outlook in South America.

Brazil's National Supply Company, or Conab, currently estimates the country's 2025-26 soybean crop at a record 180.13 million metric tons, while the Brazilian Association of Vegetable Oil Industries projects soybean processing at a record 62.5 million mt in 2026. Meanwhile, the USDA recently increased its estimate for Argentina's soybean crop to 50 million mt.

Basis recovery reveals the disconnect

Perhaps the most striking development in June has been the dramatic recovery in South American soybean oil basis levels.

Soybean Oil FOB Basis

At the beginning of the month, FOB basis levels in both Brazil and Argentina weakened to some of the most discounted levels ever recorded relative to CBOT soybean oil futures. The discounts reflected historically strong soybean oil futures, abundant regional soybean oil availability and aggressive competition among exporters.

However, as CBOT soybean oil futures declined, basis levels strengthened rapidly.

Argentina FOB Up River July basis improved from about minus 2,550 points in early June to minus 1,670 points by June 18. Brazil FOB Paranaguá July basis strengthened from roughly minus 2,530 points to minus 1,560 points over the same period.

The nearly 1,000-point recovery did not reflect a sudden tightening of South American soybean oil supplies. Rather, traders said the rebound was driven largely by weaker CBOT soybean oil futures and the resilience of physical FOB values.

Even after the recovery, basis levels remain historically discounted relative to long-term averages, indicating that soybean oil availability across South America remains abundant.

For market participants, the events of June highlight the growing divergence between a soybean oil futures market increasingly influenced by renewable diesel demand, biofuel policy and speculative positioning, and a physical export market still driven primarily by traditional vegetable oil fundamentals such as export demand, freight economics and competition from palm oil.

While CBOT soybean oil futures experienced one of their sharpest corrections of 2026, South American FOB values remained largely unchanged and basis levels recovered dramatically from historic lows, underscoring the resilience of the region's physical soybean oil market.

GLOBAL SOYBEAN WEEKLY: US reports a 132,000-mt sale to China

- CFR China market sees robust trading activity
- Chinese buying supports the US export market
- Brazil's price edge closes versus the US

In the week ending June 19, the CFR China market saw robust trading activity, with demand spread across Brazilian old-crop and new-crop 2027 shipments, as well as US new-crop October shipments. Up to 20 cargoes were reportedly traded, with the majority of the demand concentrated on Brazilian soybeans, according to a Chinese broker.

While multiple Chinese traders initially reported that state-owned buyers were picking up US soybean cargoes, the US Department of Agriculture (USDA) formalized the activity by announcing a confirmed 132,000-mt sale to China on June 18.

However, with the existing 10% tariff on US soybeans still in place, US supplies remain largely uncompetitive compared with Brazilian soybeans for Chinese commercial buyers.

"Brazilian soybeans are still much cheaper than US soybeans," said an Asian soybean trader.

Nonetheless, market participants continue to monitor US

soybean export prospects and weather in domestic growing regions, a third Chinese soybean trader said.

Buying interest was mainly focused on nearby shipments, driven by an inverse (backwardation) market structure for Brazilian soybean prices in the near term, a Chinese soybean trader said.

A second Chinese trader added that "stronger Brazilian prices for Q4 shipments have led to more demand for nearby shipments".

According to a Chinese soybean trader, as of June 16, 89% of the total open demand for July shipment, at 9.8 million mt, has been covered.

Meanwhile, 61% of the total open demand for August shipment, at 8 million mt, has been covered.

For September shipment, open demand decreased to about 6.3 million mt, while open demand for October shipment stands at 8.6 million mt.

Platts assessed the soybean CFR China M1 basis at 215 cents/bushel, over the Chicago Board of Trade August (Q) contract on June 19. The soybean CFR China M1 flat price was assessed at \$493.38/mt on June 19, up \$8.36/mt week over week.

US 2026-27 plantings near completion

The US soybean market saw the outright export price and basis spike in the week of June 15-18 amid reports that Chinese entities were seeking US soybeans.

The information led to a strong rise in Chicago Board of Trade futures on June 16, with the July contract rising 10.75 cents to 1130 cents/bu and the August contract up 11 cents to 1134.5 cents/bu.

While sources say these trades could tie into October's 25-million-mt purchase commitment, tariffs remain in place.

"While tariffs are in place, the economic situation for private Chinese processors continues to be very different from that of state-owned companies," a trader in the FOB Gulf market said. "Reaching volumes close to 25 million mt only with state participation seems unlikely."

On June 17, the US Department of Agriculture reported 372,000 mt of soybean sales to unknown destinations, correcting the initial figure of 264,000 mt. Subsequently, on June 18, the USDA reported 120,000 mt for unknown destinations and 132,000 mt for China, both for the 2026-27 marketing year.

The US Department of Agriculture also published its Crop Progress weekly report on June 15, showing that as of June 14, about 95% of soybeans had been planted in the 18 main producing states.

Platts, part of S&P Global Energy, assessed SOYBEX FOB New Orleans for August shipment at \$451.30/mt on June 18, and the outright price for CIF New Orleans for June shipment at \$442.30/mt.

Strong vessel line-up in Brazil for June

The Brazilian FOB market experienced a slowdown in activity on the week ended June 19, with only few trades reported for both 2026 and new crop 2027 shipments.

Brazilian FOB prices for August loading are now roughly in line with US levels, according to S&P Global Energy data. This marks the end of a long period of price advantage for the South American country, amid a combination of large US crop prospects and firm FOB premiums in Brazil, market participants said.

According to Brazilian agricultural agency Conab, the 2025-26 soybean crop has been officially completed nationwide. In its weekly report, the agency reported that 100% of the planted area has been harvested, and attention now shifts to winter crops.

The Brazilian grain exporters' association, ANEC, updated its estimate for soybean exports in June to 15.31 million mt, on pace for the highest volume recorded for the month, based on the most recent vessel line-up schedule.

Brazil's soybean exports through the first six months of 2026 are projected at 73.82 million mt, up 8.5% over the same period in 2026, according to ANEC.

Platts assessed the SOYBEX FOB Santos price for August delivery at \$451.69/mt on June 19, up 2.1% week over week.

GLOBAL ANIMAL FEED WEEKLY: US DDGS market weakens on sluggish demand

- Active trading activity in Brazil this week
- US DDGS values continue to decrease
- EU soybean meal imports rise by 23.3% in April

South America

South American soybean meal FOB prices were lower in a week shortened by Argentina and US holidays.

On June 19, Platts assessed the Argentine soybean meal FOB Up River outright price for August dates at \$334.88/metric ton, while the Brazilian FOB Paranaguá value for the same loading was assessed at \$334.33/mt.

The Buenos Aires Grain Exchange reported June 18 that the 2025-26 soybean harvest in Argentina reached 97.2% as of June 17, up 2.0% from the previous week and higher than the previous season.

BAGE reported that harvesting is concentrated in the southern part of the agricultural area, where some of the remaining acreage still needs to be collected, and the recorded yields continue to fall.

Trading activity was active this week in Brazil due to a trade at FOB Paranaguá premiums for August loading at plus \$1.50/st on June 17. Another trade was reported at FOB Paranaguá premiums for August loading at plus \$2.00/st on June 18.

ANEC, the Brazilian grain exporters association, estimated that Brazil will export 2.24 million mt of soybean meal in June, lower than last week's estimate but higher than 1.67 million mt by the same month last year, it said June 16.

EU

The European soybean meal market was bearish during the week ending June 19.

Platts assessed FOB Netherlands at Eur345/mt, a drop of Eur4/mt on the week, while EXW Spain soybean meal remained steady at Eur344/mt.

Dutch and Spanish traders and brokers reported that the market is quiet, with limited trades and activity.

A Spanish trader mentioned that there is sufficient supply at the port, as no new vessels have arrived from Brazil recently.

According to the EU Commission data published on June 15, EU soybean meal imports rose sharply in April to 1.58 million mt, up 23.3% from March, with Poland, Spain and the Netherlands among the biggest importers. South America supplied more than 80% of total EU volumes. Spain imported 221,364 mt (about 14% of the EU total), down 26.1% year over year but up from March, while the Netherlands took in 222,745 mt, also about 14% of the total and higher than in March. Prices reflected a month-over-month easing, with FOB Netherlands soybean meal at €349/mt and EXW Spain soybean meal at €344/mt as of 15 June.

US

The US dried distillers grains with solubles market continued to weaken during the week of June 15-18, as sluggish export demand, seasonal feed consumption declines and ample supply pressured values across domestic and export channels.

Platts assessed CIF New Orleans dried distillers grains with solubles barges for the June shipment period at \$194/st on June 17, the Chicago DDGS truck market for the June delivery period was assessed at \$169/st and the South California rail market for the June delivery period was assessed at \$220/st.

"Demand has slowed a little," one broker said early in the week. "Seasonal, so we tend to see a June/Jul-Sep fall."

Sources added that values continued to move lower following the sharp correction seen earlier in June. "The nominals do look down," one trader said, adding that freight costs remained elevated despite expectations for relief from lower fuel prices.

"Very quiet start to the week," another broker said, adding that summer demand patterns and the seasonal slowdown were weighing on activity. "Not a lot of engagement, but lots of FOB truck offers out there right now."

Export markets also remained under pressure. A third broker described CIF NOLA sentiment as "similar," while adding that "Chann has really come down also."

Participants continued to cite weak demand as the market's primary challenge. "I think there's no demand at these levels

really,” a second trader said June 17, adding that some producers were selling aggressively below prevailing export indications to move product.

The trader added that Chinese interest has so far been limited to inquiries. “They are inquiring, but it’s just price checking at the moment,” the source said. “I have seen no bids and no trades.”

By June 18, sentiment had deteriorated further. The “market is in a free fall,” a third trader said, while the second broker described activity as extremely limited ahead of the upcoming holiday. “So quiet now.”

Despite the weak tone, the second broker said values could eventually stimulate demand. “Export demand typically improves with lower values,” the broker said. “DDGS will bottom soon.”

Assessment Rationale

Grains

Platts Ags EMEA Wheat Daily Rationale

Platts assessed the Milling Wheat Marker at \$236.5/metric ton on June 19, up 50 cents from the previous assessment. Russian 12.5% handysize wheat, assessed at \$236.5/mt, was the most competitive wheat out of the three components of the Milling Wheat Marker, which also includes Ukraine 11.5%, normalized to the nearest 25 cents of \$239.75/mt when adding May’s quality normalisation of \$6.15/mt, to account for its lower protein content, and CVB 12.5% wheat assessed at \$239/mt on the day. This reflects the Platts assessment window from July 17 - 31.

Platts assessed Black Sea wheat (Russian deepsea, 12.5% protein) up 50 cents at \$236.5/mt on June 19, above a bid at \$236/mt. This reflects the Platts assessment window from July 17- 31.

Platts assessed Black Sea wheat (Ukraine deepsea, 11.5% protein) unchanged at \$233.50/mt on June 19, amid low demand, market participants said, and below an offer at \$237/mt. This reflects the Platts assessment window from July 17- 31.

Exclusions: No market data was excluded from the June 19 Black Sea wheat assessments.

Platts is part of S&P Global Energy.

Platts Asia Wheat Daily Assessment Rationale

Platts assessed Australian Premium White wheat down \$1/mt at \$275/mt FOB Kwinana June 19 for cargoes loading between Aug. 18 and Sept. 17, tracking a lower indicative value at \$275/mt.

Platts assessed Australian Standard White wheat with no protein guarantee down \$1/mt at \$270/mt for cargoes loading over the same period, tracking a \$5/mt spread between Australian Premium White and Australian Standard White with no protein guarantee.

Platts is part of S&P Global Energy.

Asia wheat assessments can be found on <PAA2440>

Market commentary can be found on <PAA2699>

This rationale applies to symbol(s) <WAUSA00>

Platts Asia Corn Daily Rationale

Platts assessed corn CFR Northeast Asia down \$1.5/mt day over day at \$259/mt CFR June 19 for feed-quality corn arriving over Sept. 17 to Oct. 17 into Pyeongtaek, below a normalized offer at \$260.54/mt CFR and above an indicative bid at \$257/mt CFR.

Platts is part of S&P Global Energy.

Asia corn assessments can be found on <PAA2440>

Market commentary can be found on <PAA2688>

This rationale applies to symbol(s) <WCINV00>

Platts Argentina Corn FOB Up River Daily Rationale

Platts assessed corn FOB Up River for loading in August at \$204.43/metric ton on June 19, up \$3.54/mt from the previous assessment.

The assessment considered the FOB premium for Up River August-loading cargoes 9 cents/bushel higher at plus 94 cents/bu to Chicago Board of Trade September (U) corn futures, based on an indicative value heard at that level, higher bids heard at U plus 93 cents/bu, and higher offers heard at U plus 100 cents/bu at the market close.

Platts is part of S&P Global Energy.

This rationale applies to symbol(s) <ARGCA00> <ARGCB00>.

Platts Brazil Corn Daily Rationale

Platts assessed the Brazilian corn FOB Santos price for August loading at \$213.87/metric ton on June 19, unchanged from the previous assessment.

The assessment considered the FOB Santos basis for August loading cargoes unchanged at plus 118 cents/bushel to the

Chicago Board of Trade September (U) contract, as neither offers nor bids were heard at the market close.

Platts is part of S&P Global Energy.

This rationale applies to symbol(s) <ABCSA00> and <ABCSB00>.

Platts FOB Black Sea Corn Daily Assessment Rationale

Platts assessed Ukrainian corn unchanged at \$229/metric ton on June 19, below an offer at \$230/mt for July loading. The competitive bid for the day was heard for CIF Marmara at \$243/mt for July loading, normalized to \$227/mt, reflecting the freight rate of \$16/mt from Ukraine ports to Marmara port. This reflects the Platts assessment window from July 17-31.

Platts is part of S&P Global Energy.

Exclusions: No market data was excluded from the June 19 Black Sea corn assessment.

This rationale applies to symbol(s) <CUBSU00>

Oilseeds.

Platts Asia Soybeans Daily Rationale

Platts assessed CFR China first-month soybeans down \$2.66/mt day over day at \$493.38/mt, while the basis was unchanged at 215 cents/bu over Aug (Q) CBOT June 19, tracking indicative an value at 215 cents/bu over August (Q) and below the sharpest normalized offer at 224 cents/bu over August (Q), for Brazil August shipment.

Platts assessed CFR China second-month soybeans down \$2.30/mt day over day at \$501.55/mt, while the basis was unchanged at 223 cents/bu over November (X) CBOT, tracking an indicative value at 223 cents/bu and below an offer at 250 cents/bu over November (X), for Brazil September shipment.

Platts is part of S&P Global Energy.

This rationale applies to symbol(s) <SYBAB00> <SYBAA00> <SYBAF00> <SYBAD00> <SYBAC00> <SYBAE00>

Platts Brazil Soybean Daily Assessment Rationale & Exclusions

Platts assessed the SOYBEX FOB Santos soybean contract for August loading at \$451.69/metric ton on June 19, unchanged from June 18.

The FOB Santos basis for August loading was unchanged at plus 101 cents/bushel to the Chicago Board of Trade August (Q) contract, based on a spread to the Paranaguá paper market last heard at plus 2 cents/bu. No bids or offers were heard for the full August loading of FOB Santos cargo on the day.

The FOB Paranaguá basis for August loading was unchanged at plus 99 cents/bu to the CBOT (Q) contract, as no offers or bids were heard on the day.

Platts assessed the SOYBEX FOB Santos soybean contract for March loading at \$427.44/mt on June 19, unchanged from June 18.

The FOB Santos basis for March loading was unchanged at parity to the CBOT March (H) contract, based on a spread to the Paranaguá paper market last heard at parity. No bids or offers were heard for the full March loading of FOB Santos cargo on the day.

The new crop FOB Paranaguá basis for March loading was unchanged at parity to the CBOT March (H) contract, as no offers or bids were heard on the day.

Platts is part of S&P Global Energy.

Exclusions: No data was excluded.

Animal Feed and Protein

Platts Argentina Soybean Meal Daily Rationale

Platts assessed the Argentine soybean meal FOB Up River price for August loading at \$334.88/metric ton on June 19, unchanged from the previous assessment.

The basis for August loading in the Up River cargo market was assessed unchanged at \$2.50/short ton to the August (Q) futures at the Chicago Board of Trade, as neither offers nor bids were heard at the market close.

Platts is part of S&P Global Energy.

This rationale applies to symbol(s) <SYMAA00> and <SYMAB00>.

Platts Brazil Soybean Meal Daily Rationale

Platts assessed the Brazilian soybean meal FOB Paranaguá price for August loading at \$334.33/metric ton on June 19, unchanged from the previous assessment.

The basis for August loading in the Paranaguá paper market was assessed unchanged at \$2.00/short ton to the August (Q) futures at the Chicago Board of Trade. The assessment considered an indicative value heard at that level, indicative offers at plus \$3/st and indicative bids at \$0/st to the CBOT Q contract at the market close.

Platts is part of S&P Global Energy.

This rationale applies to symbol(s) <SYMBA00> and <SYMBB00>.

Vegetable Oils.

Platts Asia Palm Oil Daily Rationale

Platts assessed CPO CFR WC India at \$1,235/metric ton June 19 for July loading, up \$2.50/mt from June 18, below an offer and above a bid.

A CPO offer was heard at \$1,240/mt and a bid at \$1,230/mt on a CFR WC India basis, shipping in July.

An August shipment of CPO CFR WC India was unchanged at \$1,242.50/mt June 19, considering a \$7.50/mt carry between July and August.

Platts assessed CPO FOB Indonesia at \$1,200/mt June 19 for July loading, up \$10/mt from June 18, below an offer and above a bid.

A CPO offer was heard at \$1,210/mt and an indicative bid at \$1,190/mt on a FOB Dumai basis, shipping in July.

An August shipment of CPO FOB Dumai was at \$1,210/mt June 19, up \$10/mt from June 18, considering a \$10/mt carry between July and August.

Platts assessed RBDPS FOB Indonesia at \$1,075/mt June 19 for July loading, up \$5/mt from June 18, below an offer and above a bid.

An RBDPS offer was heard at \$1,090/mt and an indicative bid at \$1,060/mt on a FOB Dumai basis, shipping in July.

An August shipment of RBDPS FOB Dumai was at \$1,085/mt June 19, up \$5/mt from June 18, considering a \$10/mt carry between July and August.

Platts assessed PFAD FOB Indonesia at \$1,005/mt June 19 for July loading, up \$10/mt from June 18, below an offer and above a bid.

A PFAD offer was heard at \$1,020/mt and an indicative bid at \$990/mt on a FOB Dumai basis, shipping in July.

An August shipment of PFAD FOB Dumai was at \$1,015/mt June 19, up \$10/mt from June 18, considering a \$10/mt carry between July and August.

Platts is part of S&P Global Energy.
